

WorldClock Next

Up to six time zones on one screen, so you know the hour where your client is before you call.

Six zones · Any browser · Windows app

WORLD CLOCKS

01

Six time zones. One glance.

Numerals big enough to read from across the room, with the day and the offset written out above each city.

London GMT
1:41:00 AM
Fri Nov 14

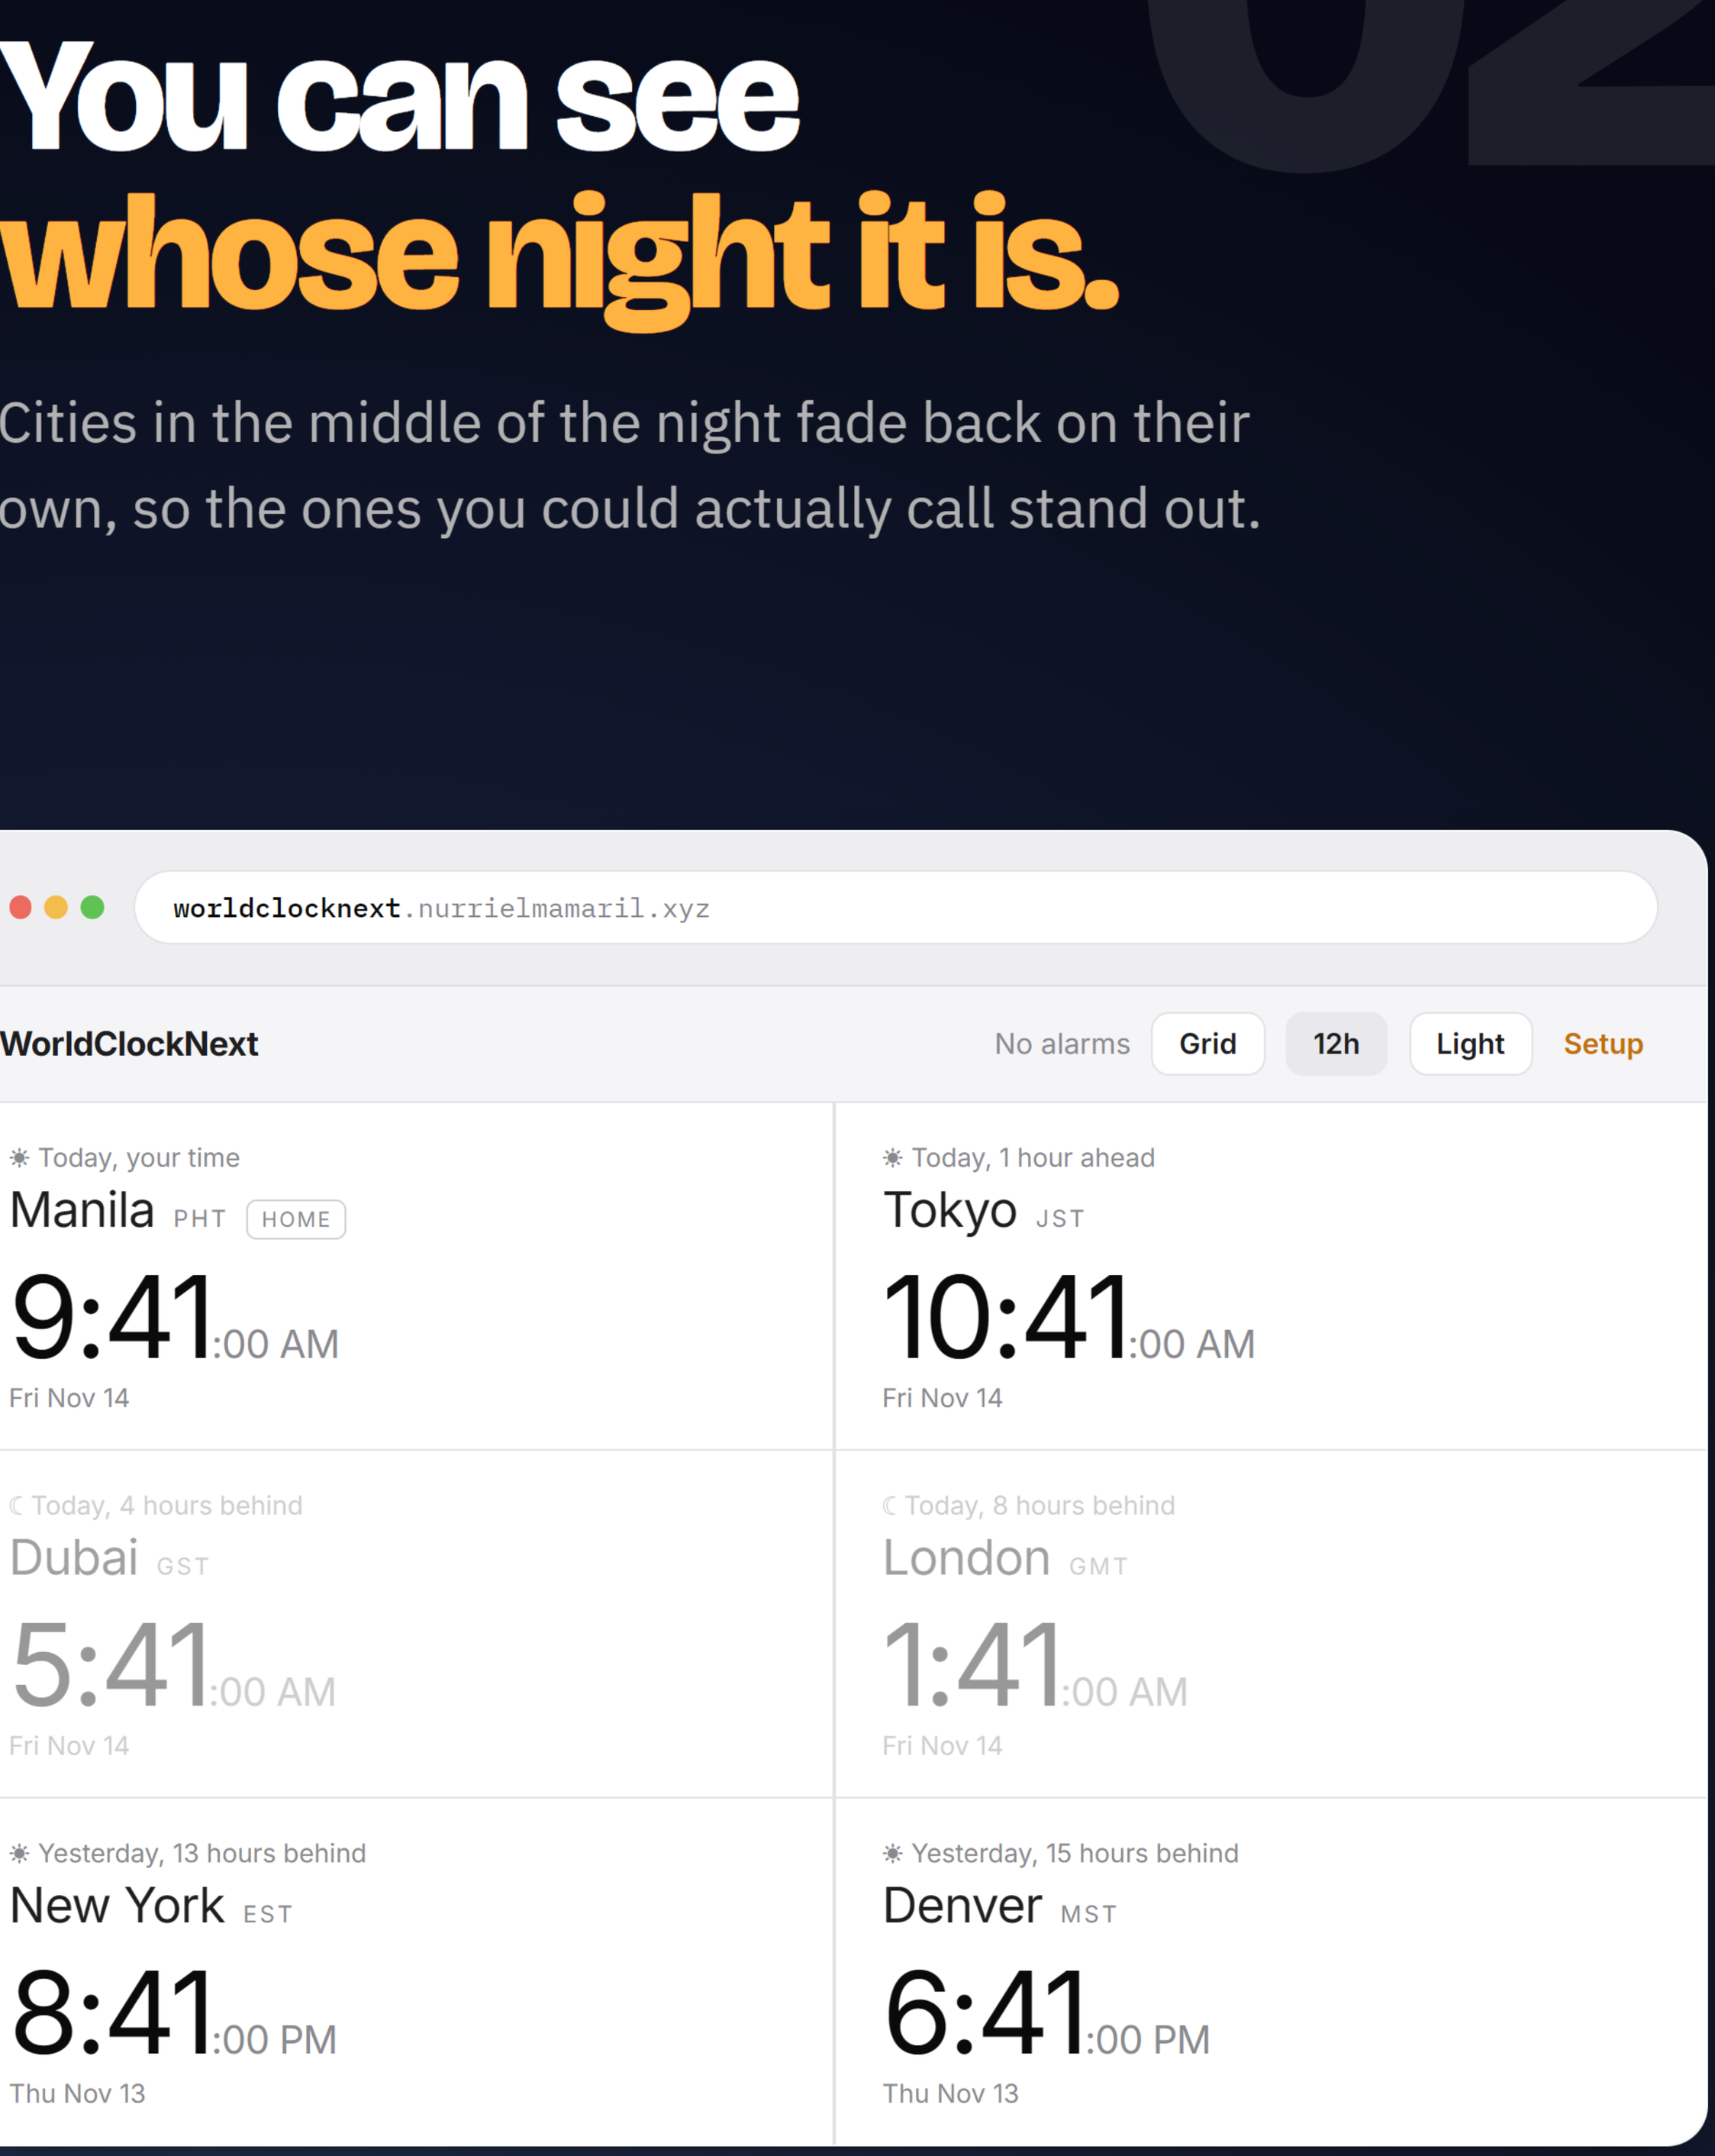

☀ Today, 1 hour ahead
Tokyo JST
10:41:00 AM
Fri Nov 14

02

TIME OF DAY

You can see whose night it is.

Cities in the middle of the night fade back on their own, so the ones you could actually call stand out.

→ OFFSETS AND DATES

03

How far ahead, in plain words.

“Yesterday, 13 hours behind.” No counting on your fingers and no mental arithmetic.

ALARMS

04

Alarms that keep their own timezone.

Nine in the morning on the New York clock rings at nine in the morning in New York, whatever the hour is where you are.

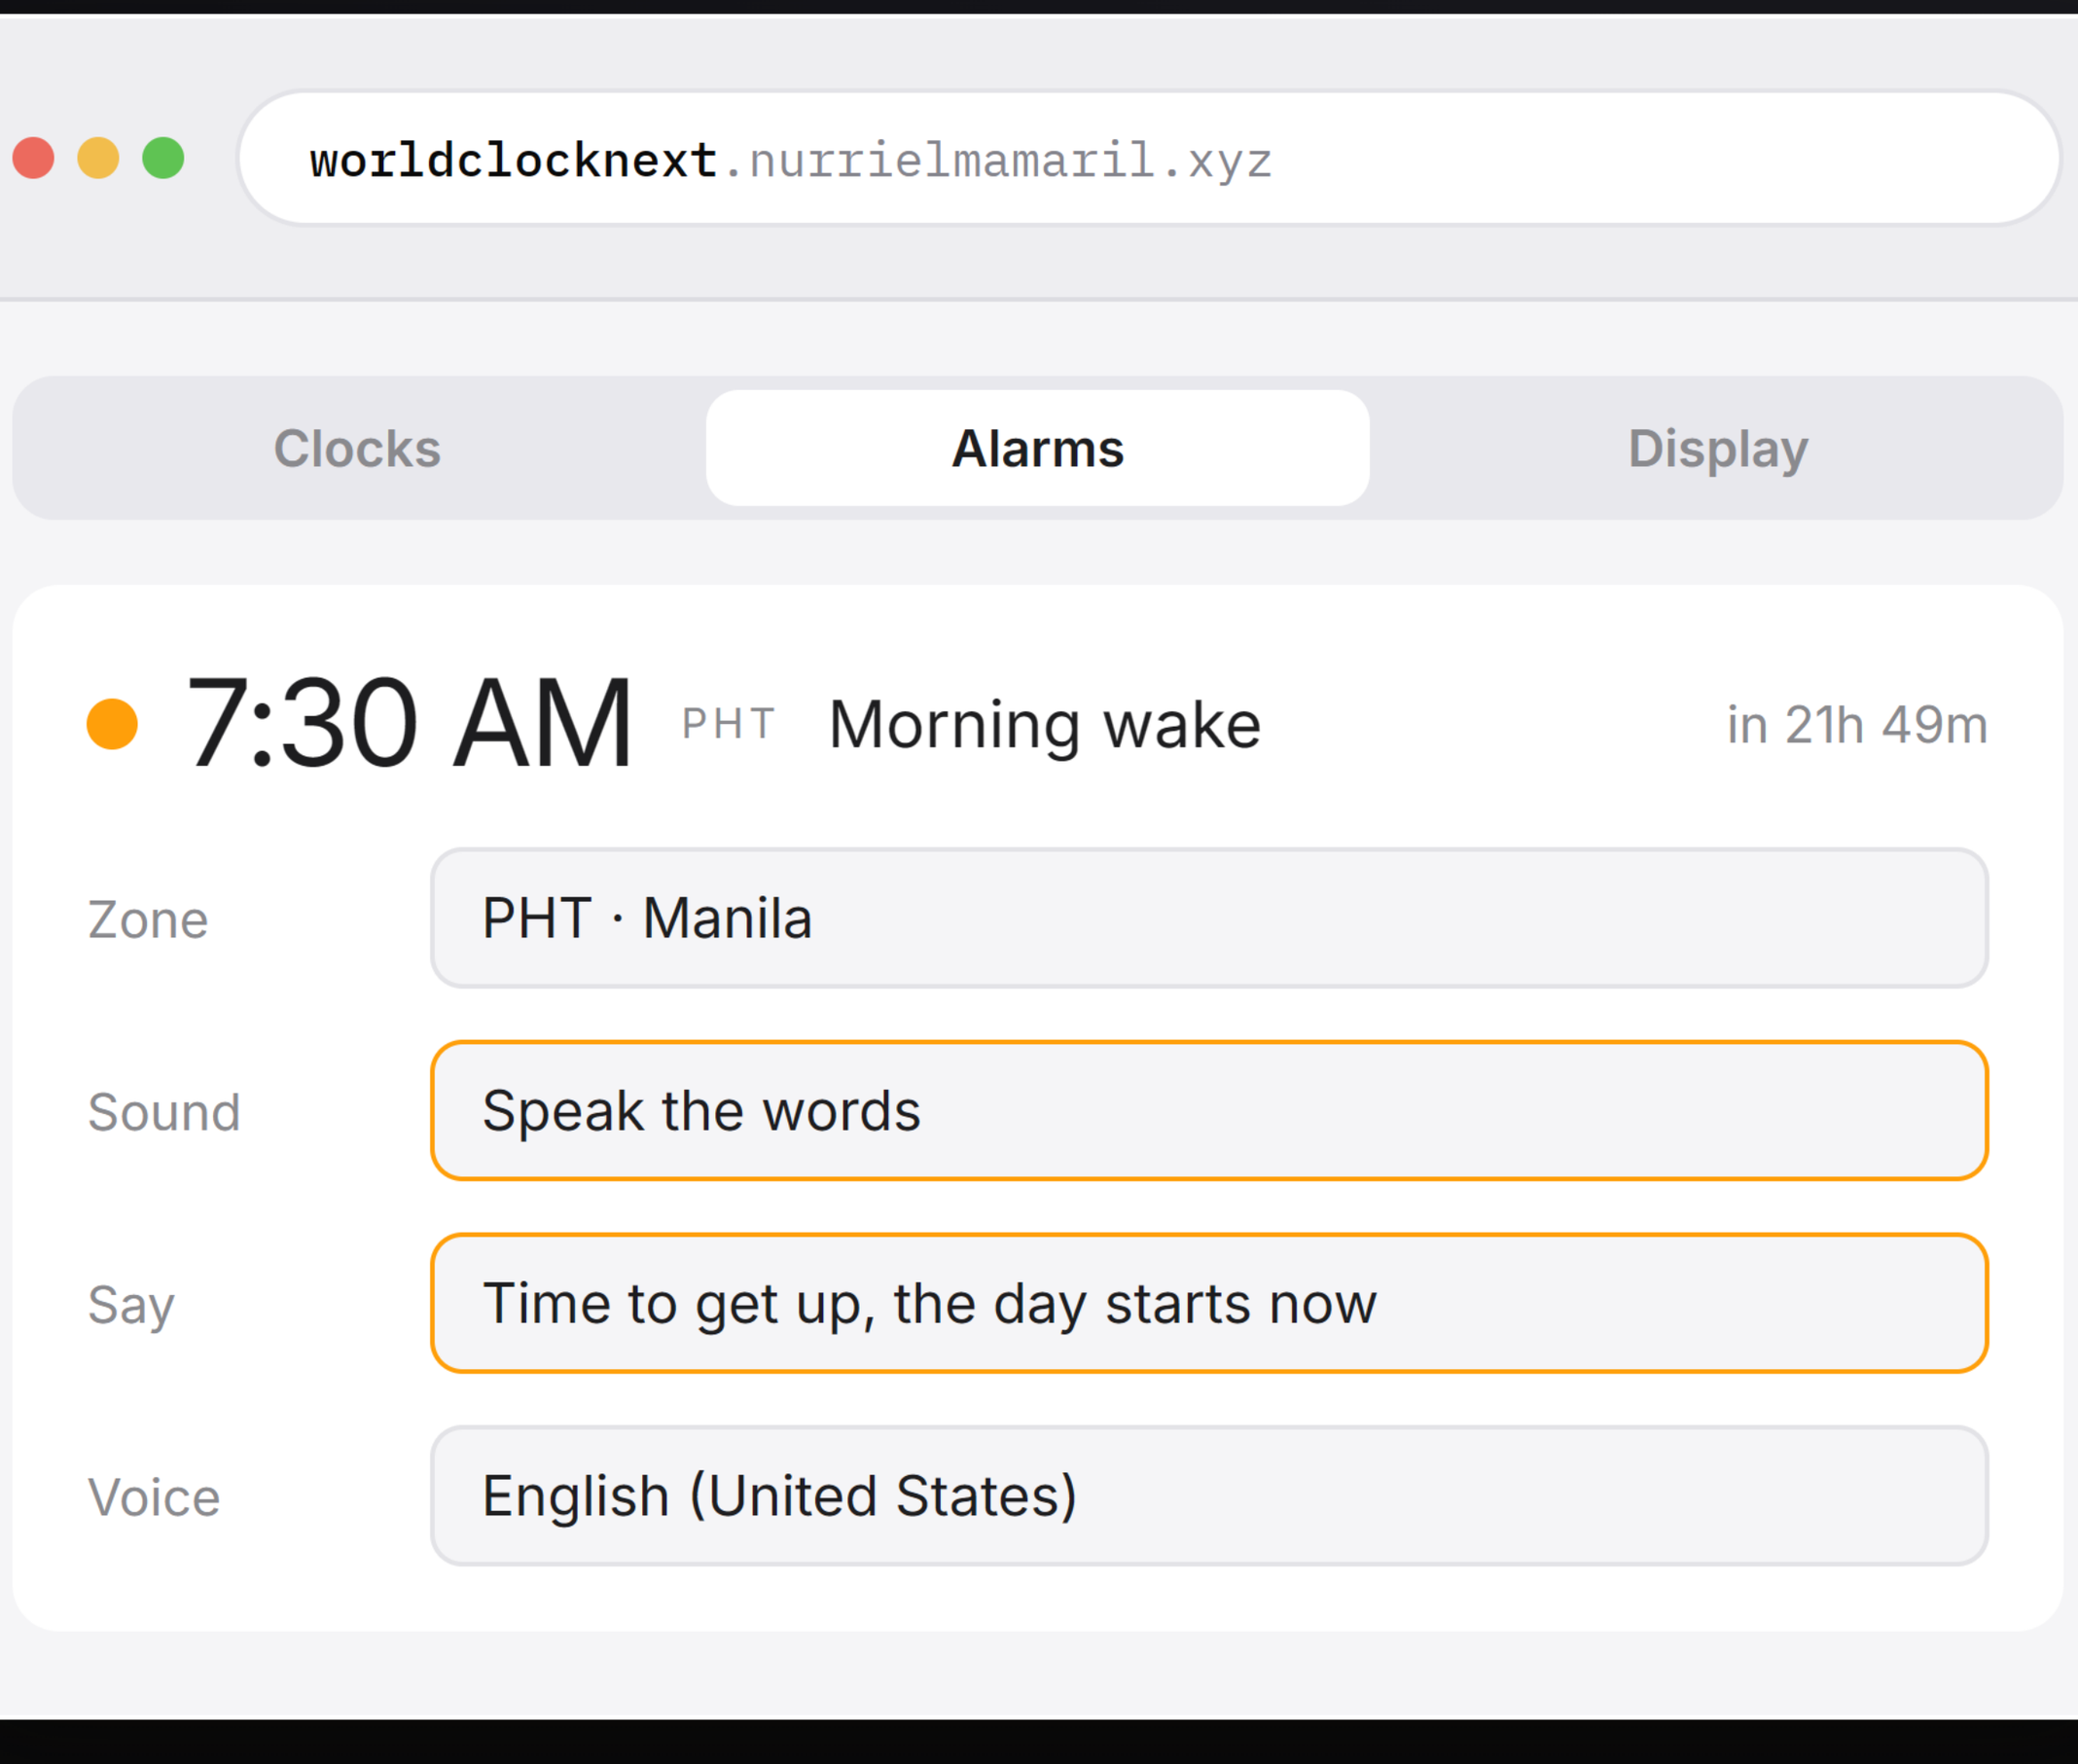

SPOKEN ALARMS

05

Type it.
Hear it.

Write the words you want and the alarm says them out loud, over and over, until you dismiss it.

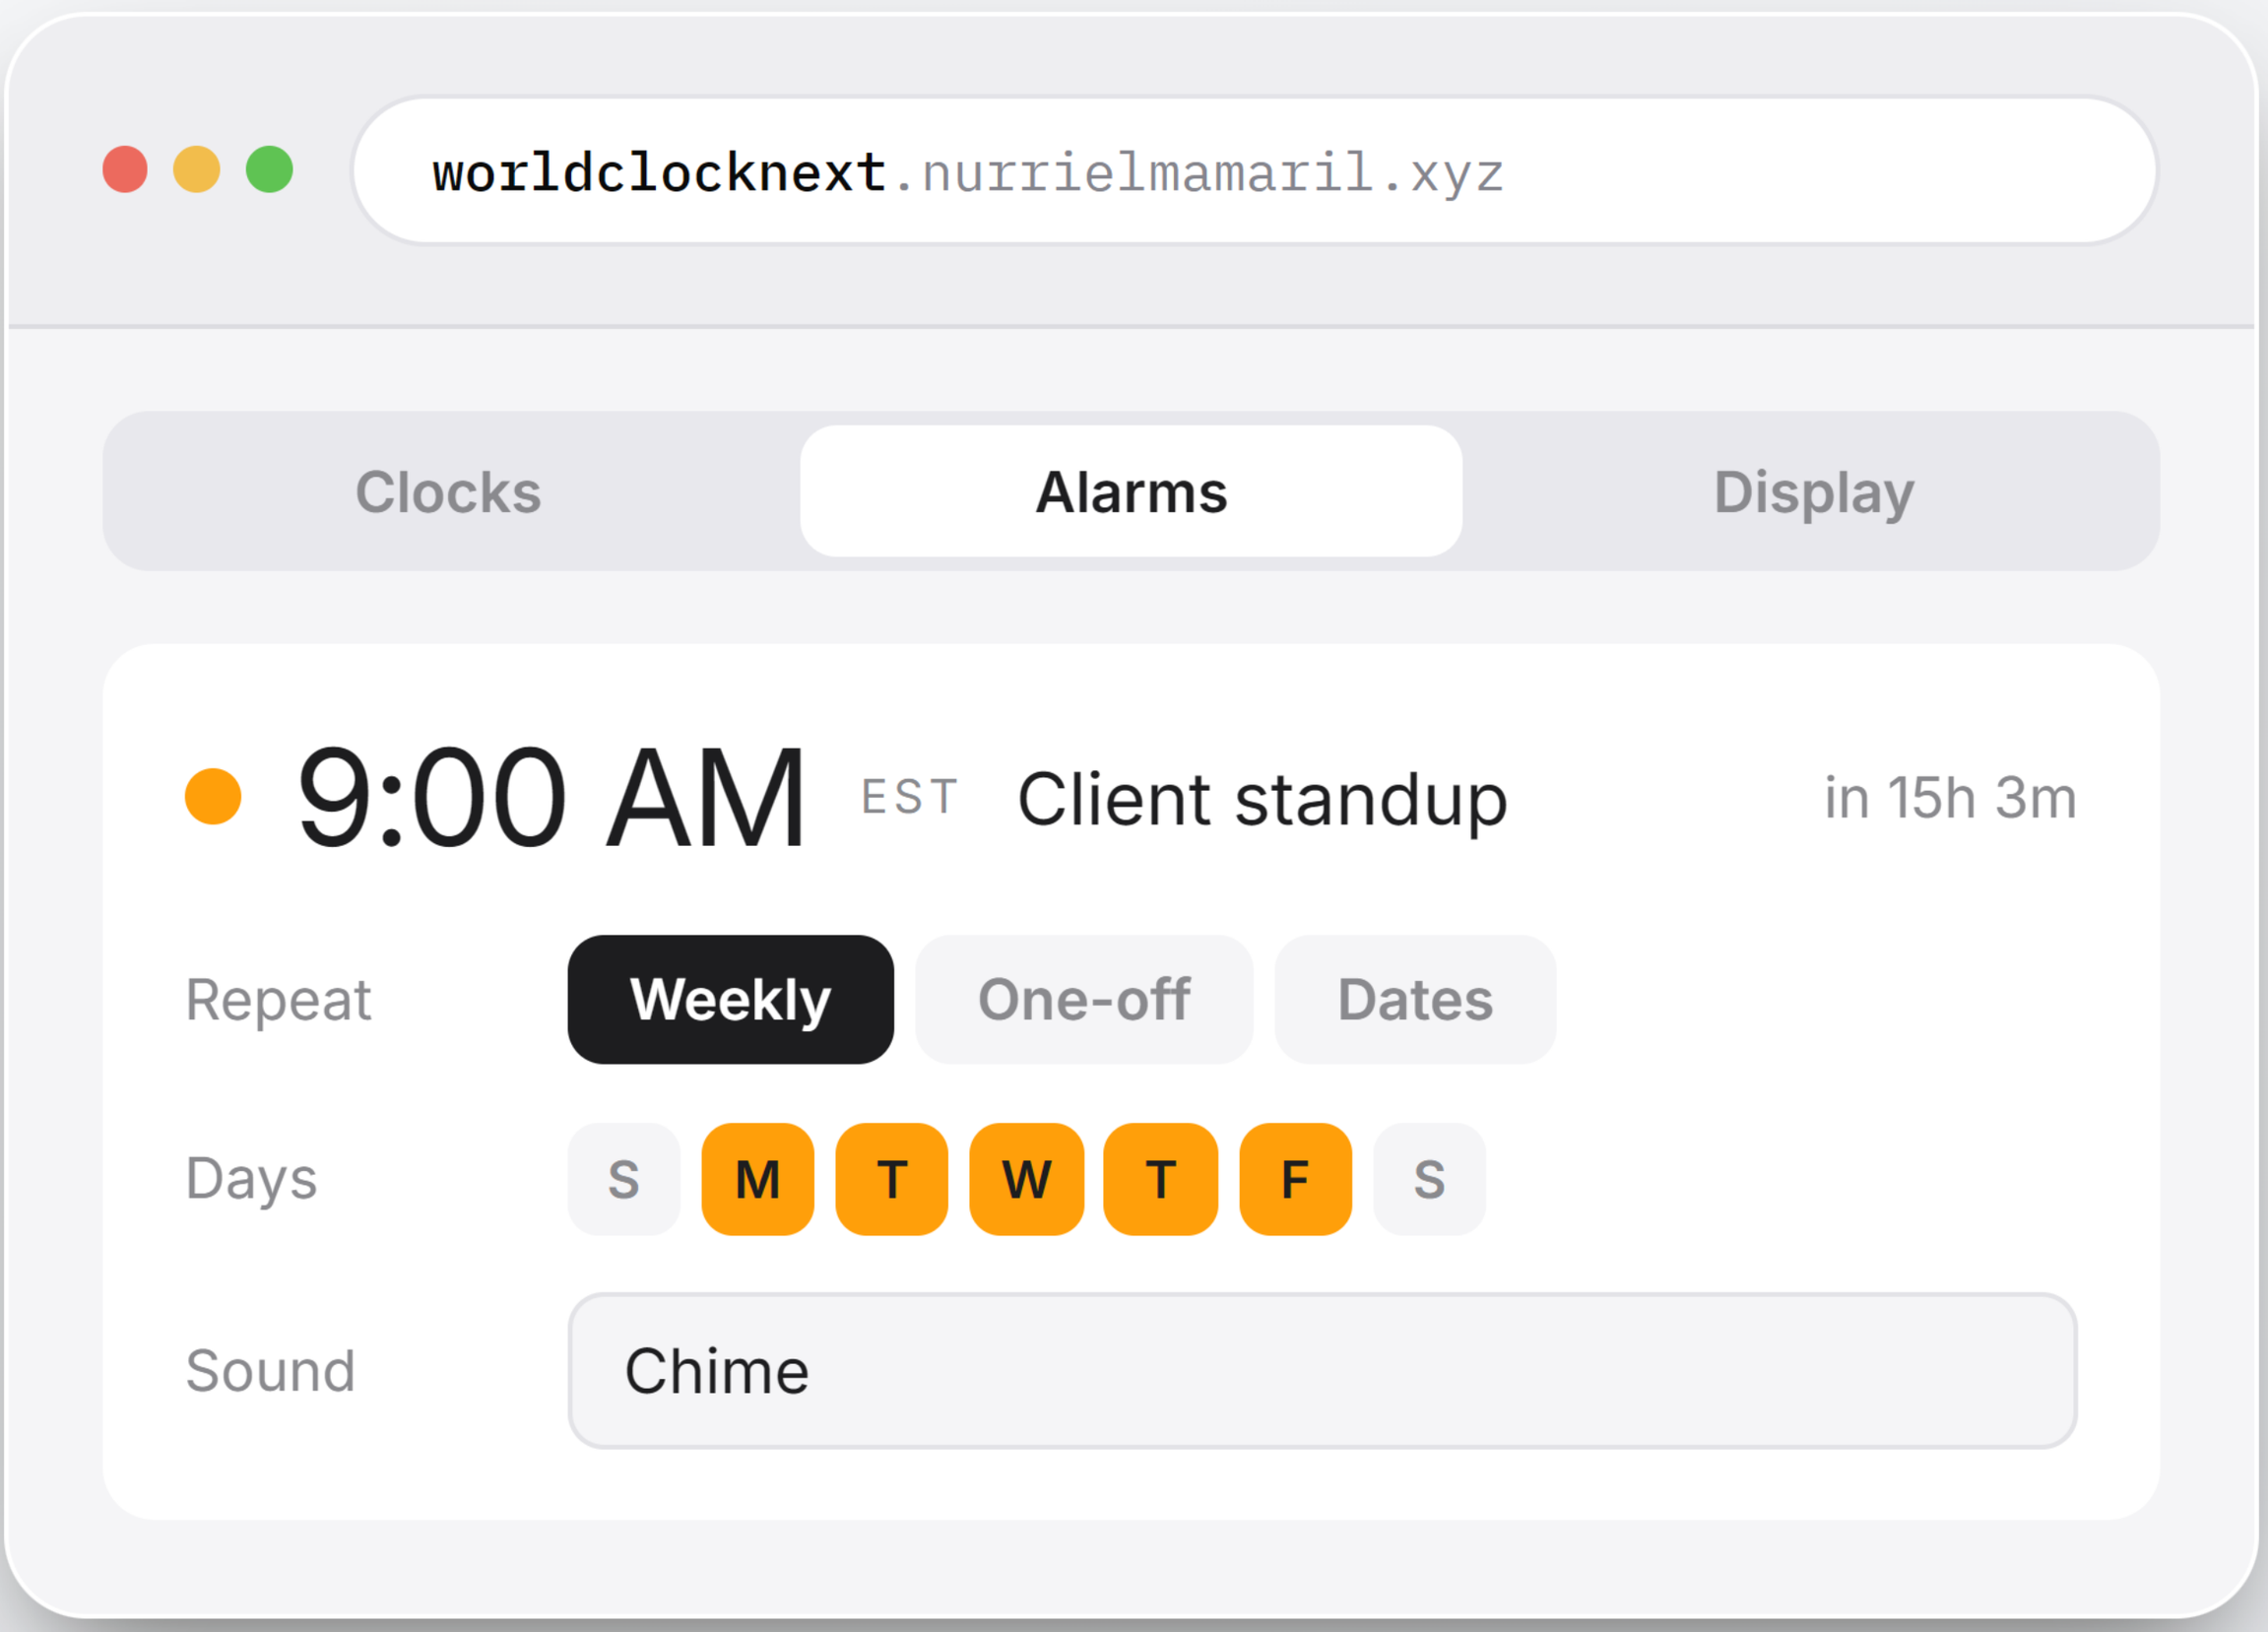

SCHEDULING

06

Weekly. Once.
Or your own dates.

However the meeting actually repeats. Pick the weekdays, set a single date, or list the days it lands on.

LAYOUTS

07

Any shape of window.

A strip across the top of a monitor, a column down the side, or a grid. It re-flows itself to fit.

LIGHT AND DARK

08

Light or dark. Automatically.

It follows the system theme and re-derives every colour to match, or you can pin it to one and leave it.

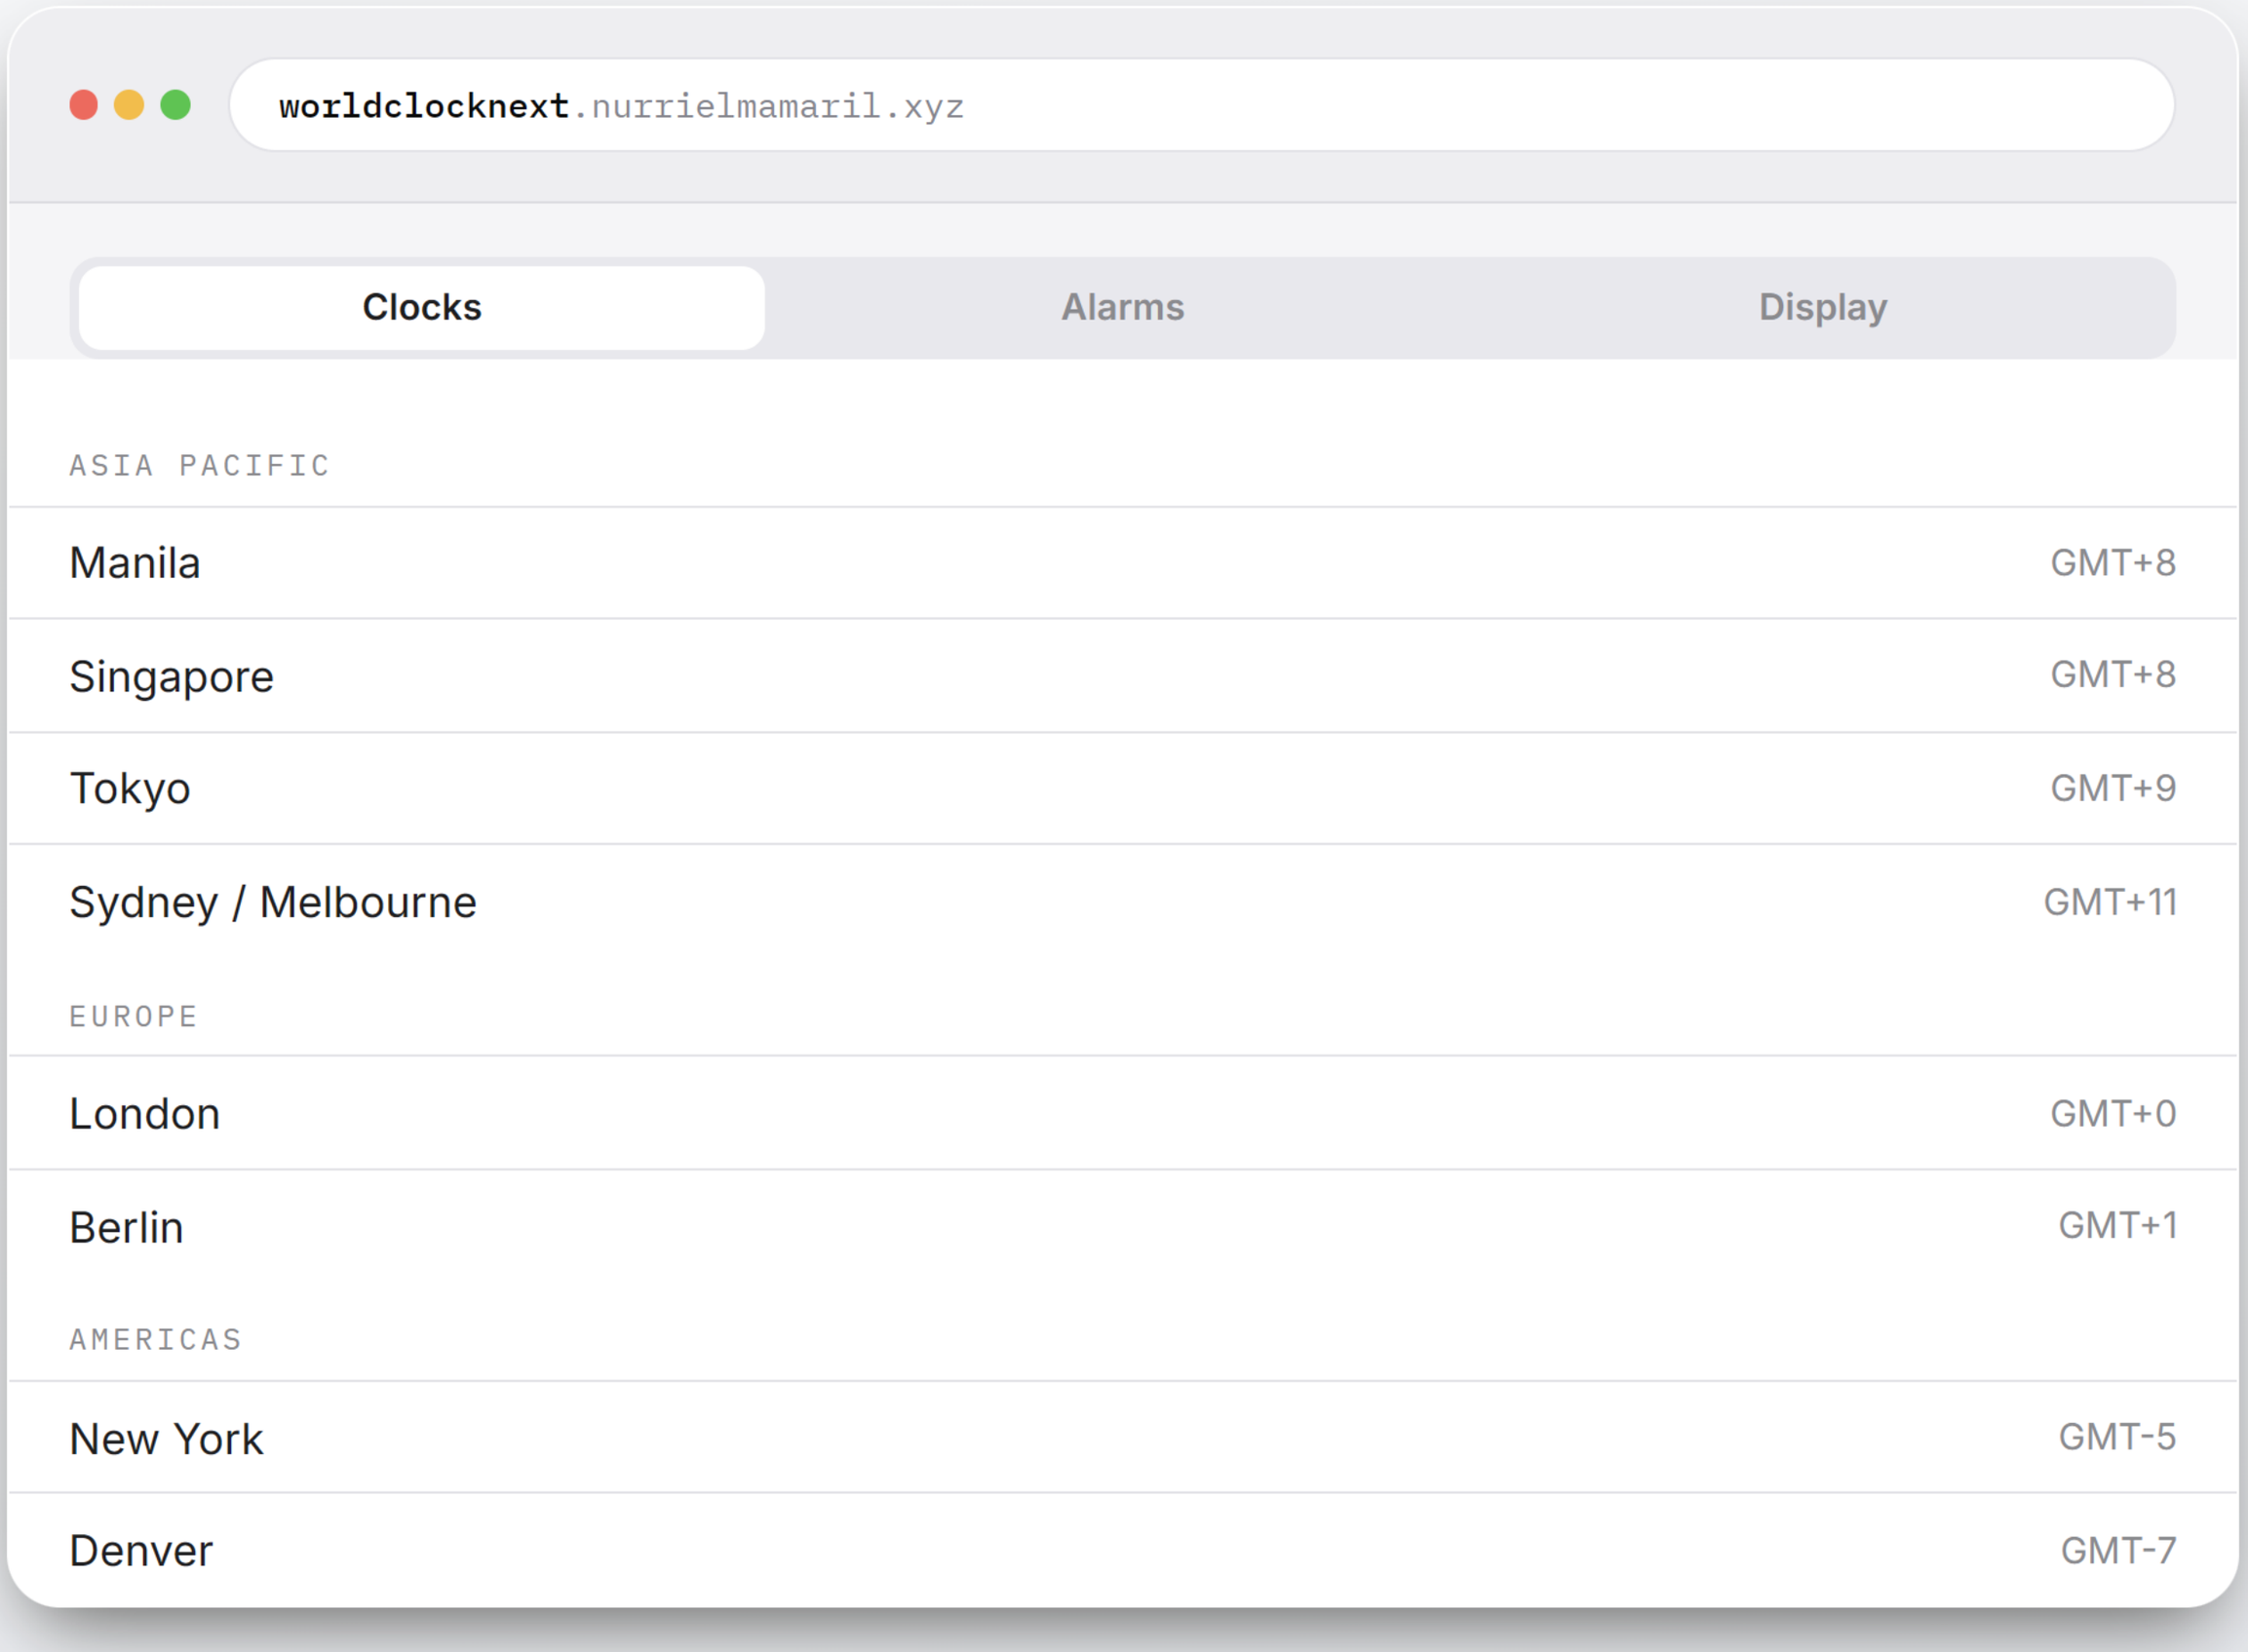

ANY TIME ZONE

09

Every zone on earth.

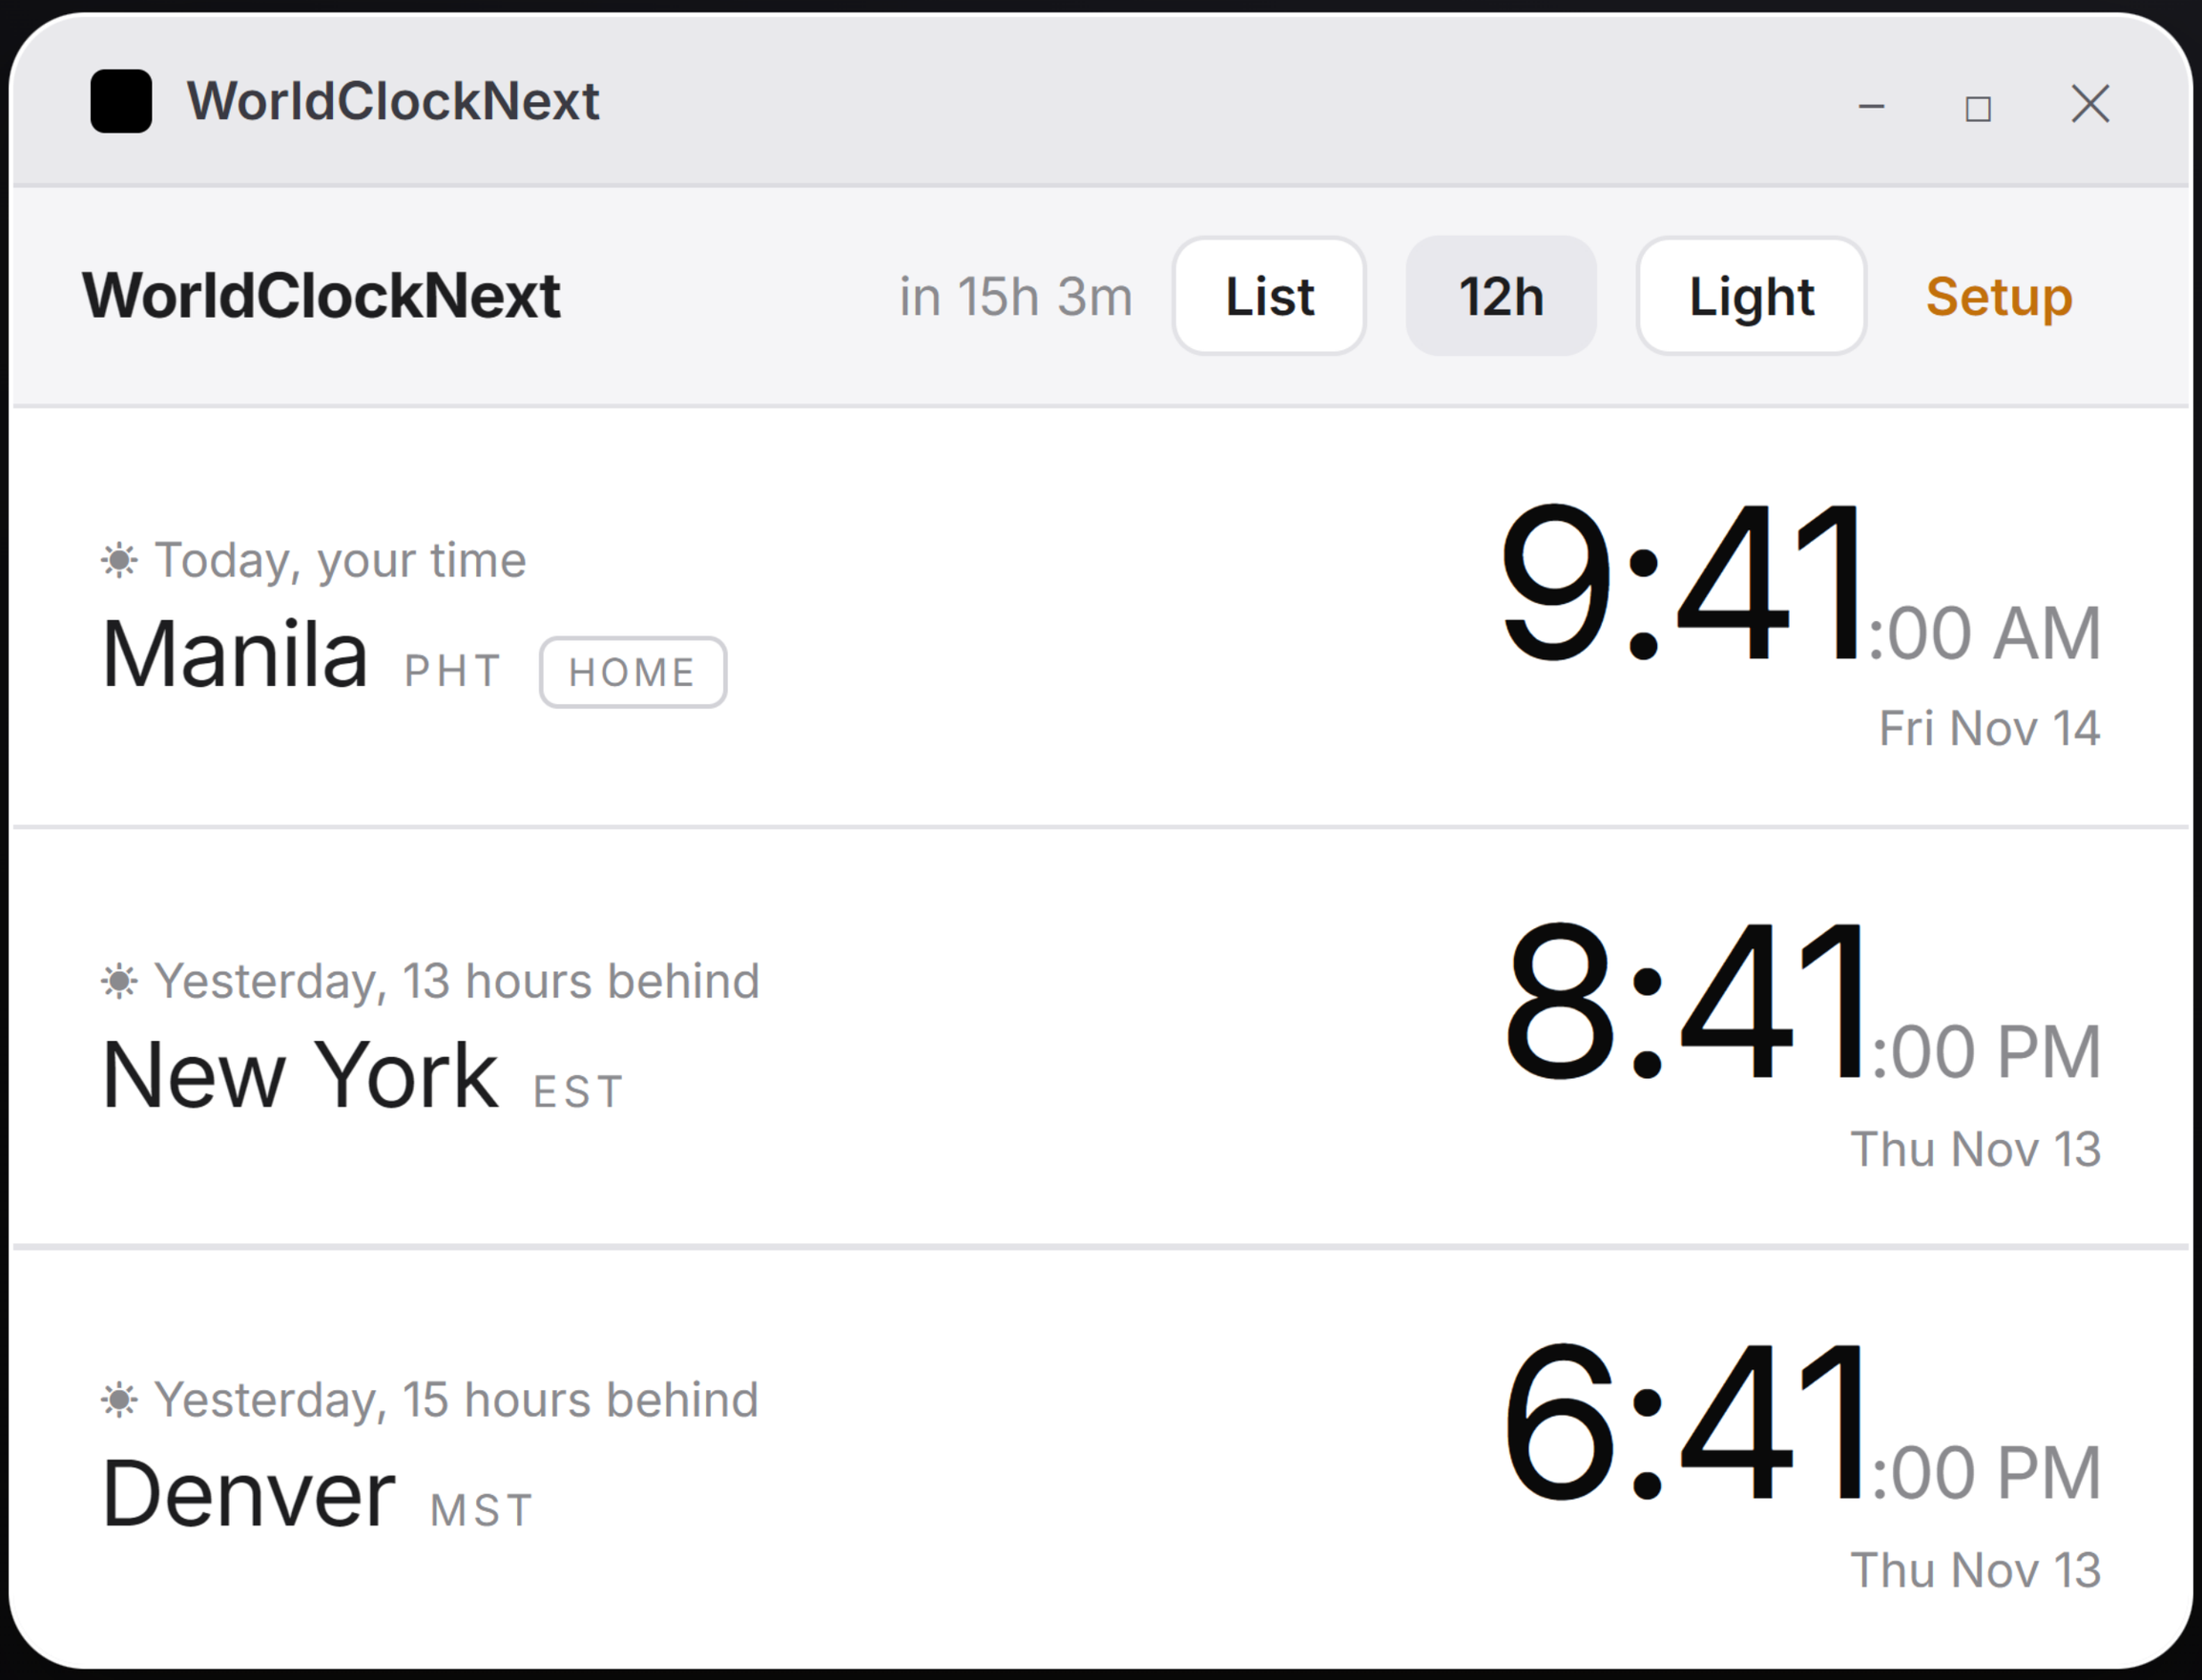

Hundreds of cities, grouped by region, each with its offset. Drag them into whatever order you read them in.

WINDOWS APP

Also a real Windows app.

An installer, its own window and its own icon, so it pins to the taskbar and opens without a browser.

Know the hour where they are.

Free, no sign-up. Open it in any browser, or install it on Windows and pin it to the taskbar.
